

THE LATEST WAY TO DIAGNOSE HEART DISEASE

ONE Non-invasive Heart Test

At DMH, precision medicine is transforming heart care through the use of Cardiac PET/CT Perfusion. This non-invasive test makes it possible for DMH Cardiologists to find blockages and narrowing of the heart's arteries without a more invasive heart catheterization.

DMH IS THE ONLY COMMUNITY HOSPITAL IN ILLINOIS OFFERING CARDIAC PET/CT PERFUSION FOR ADVANCED DIAGNOSIS.

The Benefits Of Heart Diagnosis with Cardiac PET/CT Perfusion

EARLIER: Cardiac PET/CT Perfusion allows physicians to go beyond what the eye can see and diagnose heart disease at the highest level of detection.

FASTER: Cardiac PET/CT Perfusion is a safe, non-invasive test which can be completed much quicker than more invasive tests.

MORE ACCURATELY: Because Cardiac PET/CT Perfusion is more precise, a more accurate diagnosis can be reached faster and with fewer tests.

Ask your physician if Cardiac PET/CT Perfusion is an option for you. You may be able to avoid a more invasive heart catheterization. For more information, call 217-876-2400.
